

Creating a custom signature brush

Photoshop
really creating a custom paintbrush
File
New
5 inches by 5 inches
Res: 300
Color mode: RGB color
background white
OK

Pick any font you would like and type your name
Shape tool (2 below the Text tool) squishy star
Choose a shape to use with your name (change color is you would like)
Change layers so name is in front of the shape

Merge layers:
layer
merge visible
now only have one layer

crop tool - crop around your name close to your signature

save in your folder (save as jpeg)
file, save as, files, students, your folder, save quality of 12

you have created a brush and will need to put it in the brush menu

Edit
Define brush preset
(you will see your signature)
click o.k.

Now open any picture you have created.
put a frame around the picture
bottom left corner of the tools - foreground and background colors
pick any two colors

To put signature on picture
Select brush tool
drop down tool
very last brush will be your signature

It is going to be big - adjust with the meter diameter in the brush catalog
does not show as a layer

click and drag
can adjust the opacity.

This can only be used on the computer you are working on.
